

Felipe Arce

FRONT-END DEVELOPER

📍 Concepción, Chile · ✉ felipearce.2004@gmail.com · ☎ 9 3589 3317 · 🌐 pipeos.vercel.app · 🌐 pipeos · 🌐 pipe1os

About

Front-end developer building production-grade web applications with Next.js, TypeScript and PostgreSQL. Hands-on experience with authentication systems, RBAC/RLS authorization, and financial dashboards deployed for real end users. Focused on clean architecture, maintainable code and solving concrete problems

Education

Duoc UC – Concepción, Chile Mar 2026 – Present
Computer Engineering*

Focused on software development, databases and modern web technologies.

Universidad Católica de la Santísima Concepción – Concepción, Chile Mar 2024 – Mar 2026
Computer Science*

Academic foundation in algorithms, programming fundamentals and software engineering. Transitioned to Duoc UC to pursue a more applied engineering program.

Projects

FEUCSC Financial Transparency Portal Jan 2026 – Present

Full-stack financial transparency platform built for FEUCSC, the student federation of Universidad Católica de la Santísima Concepción. Actively used for expense tracking, auditing and public accountability.

- ◆ Designed and implemented role-based access control using Supabase RLS policies, separating admin, reviewer and public access levels.
- ◆ Built secure server-side file upload pipeline to Cloudinary with magic-byte validation, signed requests and folder-restricted deletions — API secrets never exposed to the client.
- ◆ Wrote automated tests with Vitest covering authentication helpers, upload validation and image signature logic.
- ◆ Configured GitHub Actions CI/CD pipeline running build validation, test suite and Lighthouse CI on every push to main.
- ◆ Implemented ISR with cache invalidation on admin writes and security headers including CSP in next.config.ts.
- ◆ Designed the PostgreSQL schema with three-layer access control: RLS policies, Next.js middleware and server-side layout validation.

Skills

Frontend: Next.js, React, TypeScript, Tailwind CSS

Backend & Database: Supabase, PostgreSQL, RBAC/RLS, Cloudinary

Testing & CI: Vitest, GitHub Actions

Tools: Git, GitHub, Vercel, Chrome DevTools
